Abstracts

Passive wireless temperature sensors, as a new type of temperature measurement device, are widely needed in the engineering field due to their battery free power supply and wireless transmission function. Their passive characteristics, wireless transmission capability, and high reliability make them an ideal choice for temperature monitoring. Through extensive applications in building energy efficiency management, industrial equipment monitoring, power system monitoring, and infrastructure monitoring, passive wireless temperature sensors provide strong support for engineering management and maintenance, promoting the intelligent and efficient development of the engineering field. Wireless temperature sensors are used to measure the temperature on the surface or at the contact points of high-voltage charged objects, such as exposed contacts inside high-voltage switchgear, bus connections, outdoor circuit breakers, and transformers. A wireless temperature sensor is composed of a temperature sensor, signal conditioning and amplification, logic control circuit, wireless modulation interface, etc. The sensor sends the collected temperature signal to the wireless temperature monitoring device through a wireless network.

The global Passive Wireless Temperature Sensor market size was estimated at USD 169.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.20% during the forecast period.
