Abstracts

Patent Drafting Service is a technical and legal document creation service provided by professional intellectual property personnel (such as patent agents, patent lawyers or senior patent engineers). It aims to transform the inventor's technological innovation content into patent application documents that comply with the provisions of the Patent Law and have legal effect, so as to support the inventor in submitting patent applications to the Patent Office and ultimately obtaining patent protection. With the continuous progress of science and technology, enterprises and research institutions in various industries are constantly increasing their R & D investment, resulting in a large number of technological innovations that need to be protected by patents, thus driving the demand for patent - drafting services. For example, in the healthcare field, the continuous emergence of new drug technologies and medical devices has made patent protection more crucial. In the context of global economic competition, the importance of intellectual property is gradually recognized by all parties. Enterprises pay more attention to the protection of their own intellectual property rights, and are willing to entrust professional institutions to draft high - quality patent applications to ensure the effectiveness and scope of patent protection. The complexity of technical innovations is increasing, especially in fields such as artificial intelligence, biotechnology, and new energy. The writing of patent applications requires professional knowledge and experience. Professional patent - drafting service providers can better meet these requirements and help applicants obtain patent authorization.

The global Patent Drafting Service market size was estimated at USD 1235.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
