Abstracts

Patient positioning lasers are precision medical devices that utilize laser beams to project reference lines or points onto a patient's body, enabling accurate alignment during diagnostic imaging procedures such as CT, MRI, PET, or radiation therapy. These systems ensure reproducible patient setup by providing visual guides for technicians to position patients consistently according to prescribed treatment or scan protocols, thereby enhancing imaging quality, reducing setup errors, minimizing retakes, and contributing to more effective and efficient delivery of care. They are typically integrated with imaging or therapy equipment and may include features such as adjustable laser alignment, safety interlocks, and compatibility with various clinical environments.

The global Patient Positioning Lasers market size was estimated at USD 125.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
