Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Patient Transfer Disc competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of patient transfer turntables was approximately 4-8 million units, with an average selling price of approximately US\$15-80 per unit and a gross profit margin of approximately 45%. Single-line production capacity was approximately 200,000-600,000 units per year. A patient transfer turntable is a nursing aid used to assist individuals with limited mobility (such as the elderly, post-operative patients, and people with disabilities) in horizontal rotational transfers between beds, wheelchairs, sofas, commodes, or car seats. Its core function is to reduce the difficulty and risk of transfers by minimizing friction. The upstream supply chain of patient transfer turntables mainly includes suppliers of raw materials and components such as engineering plastics, steel, and ball bearings; the midstream consists of medical device manufacturers, who produce them through injection molding and assembly processes; and the downstream reaches hospitals, nursing homes, and home users through medical device distributors, rehabilitation supply stores, and online platforms. Its core demand stems from the rigid nursing needs of the disabled elderly and postoperative patients to be safely transferred between beds and chairs in the context of a global aging society. At the same time, hospitals and nursing homes have also formed stable procurement to reduce the workload and occupational injury of nursing staff. The overall market is driven by the improvement of professional nursing quality and the trend of home-based elderly care.

The global Patient Transfer Disc market size was estimated at USD 180.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00%

during the forecast period.
