Abstracts

A patio heater, also known as an umbrella or mushroom heater, is a radiant heating appliance that generates thermal radiation in outdoor spaces. Patio heaters run on natural gas or propane gas. They also run on electricity. During the operation of a patio heater, heat is radiated in a circular pattern around the appliance. Patio heaters facilitate the provision of warmth in their vicinity. Propane and natural gas heaters, a burner on top of a pole, it burns liquefied petroleum gas (LPG), propane or butane, and directs the flames against a perforated metal screen. Heat is radiated from the surface of the screen in a circular pattern around the appliance. A reflector at the top of the burner reflects heat that would be otherwise lost upwards. This is because the reflecting hood is usually silvered which makes it a poor absorber of heat but excellent at reflecting infrared radiation back. This reduces the amount of heat lost by conduction as silvered surfaces will not absorb infrared light. Some newer types of patio heaters are electrically powered radiative heaters that emit infrared energy onto nearby surfaces, which in turn heat up the surrounding air. The Patio Heaters industry can be broken down into several segments, Propane, Electric, etc. Across the world, the major players cover Bond Manufacturing, AZ Patio Heaters, AmazonBasics, etc.

The global Patio Heaters market size was estimated at USD 514.87 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
