Abstracts

The pavement friction tester is a specialized device used to measure the coefficient of friction between a vehicle's tire and the road surface, providing critical data for assessing skid resistance and overall road safety. These testers typically employ either a locked-wheel trailer system, a side-force friction trailer, or a portable dynamic friction meter, with measurements often standardized according to protocols such as ASTM E274 or E1960. The data collected is essential for transportation authorities, road construction companies, and maintenance agencies to evaluate pavement conditions, prioritize resurfacing or treatment projects, and ensure compliance with safety regulations, thereby helping to reduce accidents caused by slippery surfaces, especially in adverse weather conditions.

The global Pavement Friction Tester market size was estimated at USD 25.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
