Abstracts

A Pavement Management Software is a specialized digital system designed to assist municipal agencies, transportation departments, and infrastructure managers in evaluating, prioritizing, and optimizing the maintenance, repair, and replacement of roadways, highways, and other paved surfaces. Integrating geospatial data (via GIS), condition assessment metrics (such as Pavement Condition Index, PCI), and predictive analytics models, the software aggregates real-time field data—including distress surveys (cracks, potholes, rutting), traffic volume, climate impacts, and historical maintenance records—to generate data-driven strategies. Modern solutions often incorporate mobile data collection tools, AI-powered image recognition for automated distress detection, and collaborative dashboards to facilitate stakeholder alignment, ensuring proactive management that extends pavement lifespan while minimizing lifecycle costs.
