Abstracts

Pavement overlay fabrics, also known as paving fabrics or non-woven geotextiles, are specialized materials placed between existing pavement and a new asphalt overlay to function as a waterproofing barrier, stress-absorbing interlayer, and crack retardant. These engineered fabrics are typically made from polypropylene or polyester and are designed to prevent water infiltration into the subgrade, reduce reflective cracking from the old pavement, and extend the service life of road surfaces by distributing loads more evenly. Their primary applications include highway rehabilitation, airport runways, parking lots, and other paved areas where structural integrity and longevity are critical.

The global Pavement Overlay Fabrics market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
