Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PB Heating Pipes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of PB Heating Pipes reached approximately 33 million meters, with an average market price of about USD 4.2 per meter, an annual production capacity of roughly 45 million meters, and an industry-average gross margin of approximately 24%. PB heating pipes are plastic pipes made primarily from polybutylene (PB), widely used in underfloor heating, heating systems, and hot and cold water pipelines. Their advantages include high-temperature resistance, corrosion resistance, aging resistance, and ease of installation, making them particularly suitable for low-temperature hot water systems. The production process mainly involves extrusion molding and heat fusion connection, with high automation levels and production capacities. In the supply chain, the upstream includes PB resin manufacturers and additive suppliers; and the downstream involves construction units, HVAC companies, and end-users. The cost structure consists of approximately 50% raw materials, 30% equipment and labor costs, and 20% other expenses.

The global PB Heating Pipes market size was estimated at USD 139.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global PB Heating Pipes market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
