### Report Overview

The new radiator heating oxygen-blocking polybutene (PB) pipeline forms a uniform EVOH oxygen barrier layer outside the PB pipeline through three-layer co-extrusion technology, which can effectively block oxygen from entering the thermal cycle system and reduce equipment corrosion. At the same time, due to the harder oxygen barrier layer protection of the outer layer, the inner PB material is not easily scratched and worn, and micro cracks are prevented on the pipeline, which is very suitable for the household radiator heating system.
