## Abstracts

PC diffuser film is based on polycarbonate (PC). Through a specific production process, a uniform functional coating and a non-uniform anti-stick coating are formed on the two surfaces of the film. When light passes through these coatings continuously, due to the diffuse reflection and diffusion of the non-uniform structure medium, the point light source can be transformed into a uniform surface light source, thereby achieving the effect of light diffusion.

The global PC Diffuser Film market size was estimated at USD 192.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
