Abstracts

A PCB evaluation board is a printed circuit board that has a microprocessor and minimal support logic. The evaluation board is used for testing and measuring devices such as sensors, transceivers, memory interfaces, and displays. According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share. Due to the increasing demand for products such as smartphones, the growing demand for miniaturization of electronic devices, the increasing popularity of IoT and wearable devices, smartphones use various electronic components such as microcontrollers, MOSFETs and IGBTs, which require specific power supplies features, etc., thereby providing opportunities for the global evaluation board market vendors. Other application areas include medical equipment, telecommunications equipment and transportation electronics. Other applications are also expected to witness significant growth over the forecast period owing to increasing demand for IGBT evaluation boards for various products such as mobile phones, laptops, and cameras.

The global PCB Evaluation Boards market size was estimated at USD 1475.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
