Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PCB Laser Drilling System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A PCB Laser Drilling System is a high-precision manufacturing tool used to create microvias and through-holes in printed circuit boards (PCBs), especially in high-density interconnect (HDI) and multilayer boards. Utilizing laser sources such as ultraviolet (UV), CO₂, or femtosecond lasers, these systems enable non-contact, high-speed drilling with exceptional accuracy, supporting the miniaturization and complexity required in modern electronics like smartphones, automotive systems, and 5G devices. Compared to mechanical drilling, laser drilling offers cleaner edges, tighter tolerances, and the ability to process small-diameter holes (
