Abstracts

Printed Circuit Board (PCB) is an indispensable part of electronic products and is mainly used for the support and connection of electronic components. PCB micro drills are defined based on drill bit diameter. According to IPC requirements, drill bits with a diameter $\geq 0.35\text{mm}$ are called micro drills. At present, the micro drills used in the PCB industry can be divided into two categories: ST type and UC type according to different structures. Under the same processing conditions, UC type micro drills have gradually become the mainstream of the industry because they can improve the quality of the hole wall. With the development of the electronics industry, simple carbide micro-drills can no longer meet the increasingly stringent quality requirements, and subsequently, the use of coated micro-drills has gradually increased.

The global PCB Micro Drills market size was estimated at USD 462.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global PCB Micro Drills market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
