## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PCB V Cut Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PCB V Cut machine is a device dedicated to pre-cutting circuit boards. It pre-cuts a "V-shaped groove" (also called V-Cut or V-groove) on the PCB board to facilitate subsequent board separation operations. This equipment uses two upper and lower precision cutters to perform symmetrical cutting along a predetermined path. The cutting line position is usually planned in the PCB design stage to ensure that the entire board can be smoothly and quickly separated into single small boards later. The V-cutting machine is suitable for rigid PCBs such as FR4 and aluminum substrates, and is widely used in mobile phones, home appliances, LED lighting, and automotive electronics. The equipment has the advantages of high efficiency, low cutting stress, and simple operation. It is an important process link in achieving standardized and large-scale production of electronic products.

The global PCB V Cut Machine market size was estimated at USD 88.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
