Abstracts

Pcb X Ray Inspection Systems are specialized non-destructive testing (NDT) equipment used to examine printed circuit boards (PCBs) and assembled PCBs (PCBA) for internal defects such as voids in solder joints, cracks, misalignments, and hidden or shorted electrical connections that are not visible to the naked eye or conventional optical inspection methods. These systems utilize X-ray imaging technology, including 2D, 2.5D, and 3D computed tomography (CT), to penetrate the PCB layers and generate detailed images that allow operators or automated software to detect, analyze, and verify the integrity and quality of components, solder connections, and internal structures, ensuring compliance with industry standards and reducing the risk of product failure in critical applications like aerospace, automotive, medical devices, and consumer electronics manufacturing.

The global Pcb X Ray Inspection Systems market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
