Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PCI Serial Cards competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of PCI Serial Cards reached approximately 8 million units, with an average market price of about USD 42. A PCI Serial Card is a computer expansion card that adds one or more serial ports (such as RS-232, RS-422, or RS-485) to desktops, workstations, or industrial PCs via the standard PCI bus. It is commonly used to connect external serial devices like barcode scanners, POS terminals, industrial sensors, printers, and instrumentation. Compared to motherboard-integrated serial ports, PCI Serial Cards provide more ports, higher data stability, and stronger electromagnetic compatibility, making them suitable for industrial, research, or commercial applications requiring multiple serial communications. Some models include buffering, hardware flow control, or multi-protocol support, ensuring reliable data transmission and centralized management for automation systems and monitoring equipment that require long-term stable operation.

The global PCI Serial Cards market size was estimated at USD 336.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global PCI Serial Cards market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
