Abstracts

PCIe (Peripheral Component Interconnect Express) chips are high-speed interface semiconductors designed to enable fast data transfer between a computer's central processing unit (CPU), graphics processing unit (GPU), storage devices, and other peripherals. They include controllers, switch chips, and retimers that manage bandwidth allocation, signal integrity, and connectivity across PCIe lanes, supporting applications in servers, data centers, networking equipment, AI accelerators, and consumer electronics. With the evolution from PCIe Gen3 to Gen5 and beyond, these chips are critical for meeting the growing demand for low-latency, high-bandwidth interconnects. The upstream supply chain for PCIe chips consists of semiconductor foundries, substrate suppliers, EDA software providers, and raw material vendors (e.g., silicon wafers, advanced packaging). Midstream players are fabless IC designers and integrated device manufacturers (IDMs) that design and produce PCIe controllers, switches, and retimers. Downstream, these chips are integrated into servers, storage systems, GPUs, network interface cards, and PCs, serving end markets such as cloud computing, artificial intelligence, 5G infrastructure, and enterprise IT.

The global PCIe Chips market size was estimated at USD 2404.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.60% during the forecast period.
