Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PCIe Fanout Clock Buffer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PCIe Fanout Clock Buffer is a specialized clock distribution component used in systems that implement PCI Express (PCIe) interfaces. It is designed to take a single clock signal from the system clock source (such as an oscillator) and distribute it to multiple PCIe devices or subsystems that require synchronization. The PCIe Fanout Clock Buffer ensures that the clock signal is reliably sent to various parts of the system, such as the CPU, PCIe slots, storage controllers, and other PCIe peripherals. In 2024, the global production volume of PCIe Fanout Clock Buffers was 7.75 million units, and the average price was \$20/unit. The 2024 annual production capacity per single line was approximately 10,000 units, and the average gross margin was approximately 58%. The PCIe Fanout Clock Buffer supply chain consists of Upstream, Midstream, and Downstream segments. The Upstream segment mainly provides core wafer fabrication, advanced packaging, and testing services, with top supplier representatives including TSMC, GlobalFoundries, and Amkor Technology; the Midstream segment focuses on the specialized design, manufacturing, and supply of clock buffer chips; the Downstream market covers end-application fields with strict requirements for clock signal distribution, specifically including Server and SSD, with top Downstream company representatives being Dell, HPE, and Samsung. With the continuous advancement of High-Performance Computing, data centers, and 5G communication, system requirements for clock signal synchronization and low latency are increasing daily. The iteration of the PCI Express standard to higher speeds like Gen5 and Gen6 necessitates that PCIe Fanout Clock Buffers deliver extremely low additive jitter and precise timing. This component is crucial for enabling high-port-count, high-density

interconnect systems, and its market demand will benefit from the surge in AI accelerators and enterprise-grade storage needs, presenting a very promising outlook with long-term growth potential.

The global PCIe Fanout Clock Buffer market size was estimated at USD 155.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global PCIe Fanout Clock Buffer market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
