## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PD Protocol Single-Port Fast Charging Chip competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The PD single-port fast charging protocol chip is an integrated circuit based on the USB-IF standard, designed specifically for single-port chargers. It achieves a power transmission capacity of up to 100W by dynamically adjusting the voltage (5-20V) and current (up to 5A). Its core functions include multi-protocol intelligent compatibility (such as PD3.1, QC, Huawei FCP, etc.), dynamic power management (real-time monitoring and adjustment of voltage/current), two-way communication (negotiation of charging parameters) and multiple safety protections (overvoltage/overcurrent/overtemperature protection). The chip is widely used in smartphones, laptops, car chargers and other devices to solve cross-brand compatibility issues and support fast charging solutions that charge to 50% of the power within 30 minutes.

The global PD Protocol Single-Port Fast Charging Chip market size was estimated at USD 3304.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
