Abstracts

PDLC Switchable Smart Film is a technologically advanced material that can change its transparency on demand. It consists of liquid crystal droplets dispersed within a polymer matrix, which can switch between opaque and transparent states when an electric current is applied. In its default state (power off), the film appears frosted or opaque, providing privacy by scattering light. When powered on, the liquid crystals align, allowing light to pass through and making the film clear. This technology is widely used in smart windows, office partitions, automotive glass, and display applications, offering benefits such as energy efficiency, UV protection, and enhanced privacy control.

The global PDLC Switchable Smart Film market size was estimated at USD 143.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.40% during the forecast period.
