Report Overview

Pe coated film, or polyethylene-coated film, is a versatile material consisting of a base substrate—often paper, fabric, or another plastic film—coated with a layer of polyethylene (PE) to enhance properties like moisture resistance, durability, and sealability. It is widely used in industries such as packaging, agriculture, and construction due to its ability to provide a protective barrier against water, chemicals, and abrasion while remaining lightweight and cost-effective. The PE coating can be applied in varying thicknesses and formulations (LDPE, LLDPE, or HDPE) to meet specific application needs, such as food-grade packaging requiring FDA compliance or heavy-duty industrial uses demanding high tensile strength. Its adaptability and functional benefits make it a critical component in flexible packaging solutions, protective covers, and laminates.
