Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PE Coated Paper competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polyethylene (PE) Coated paper is one of the most typically used food packaging materials globally. PE film is a chemically manufactured product with a partially crystalline structure and a lightweight thermoplastic polymer. Paper products with PE film coating are waterproof and sturdy. The PE coated paper market is expected to sustain steady growth but will undergo structural adjustments. With global policies on plastic reduction and carbon neutrality, traditional non-degradable PE coated paper will face increasing restrictions, while eco-friendly PE (bio-based PE), biodegradable coatings (PLA, water-based, or dispersion coatings) will become the industry's focus. Demand from foodservice, beverage packaging, and healthcare sectors will remain the main drivers, especially in the Asia-Pacific region where rising consumption and rapid food delivery penetration create significant growth opportunities. In Europe and North America, the emphasis will be on recyclable and compostable solutions, fostering the development of premium eco-friendly PE coated paper products. Market Drivers? Rising demand from foodservice and FMCG ? The growth of takeaway and ready-to-eat food industries drives demand for greaseproof and waterproof packaging. Environmental policies and plastic bans ? Government restrictions on single-use plastics encourage the adoption of PE coated paper as a partial substitute. E-commerce and logistics expansion ? Increasing need for durable and moisture-resistant packaging materials. Technology Trends: Biodegradable and eco-friendly coatings: Conventional PE is non-degradable; the market is shifting toward bio-based PE, PLA coatings, and water-based alternatives. Multifunctionality: Development of multi-layer coated paper with combined barrier properties (oxygen, moisture, grease resistance). Lightweight and

high-strength: Improved paper substrate and coating technologies enable thinner, stronger products. Recycling and reusability: Advances in paper-plastic separation to enhance recyclability.

The global PE Coated Paper market size was estimated at USD 5701.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
