## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PE Three-layer Co-extrusion Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PE three-layer co-extruded film is a combination of resin materials with different characteristics such as low-density polyethylene (LDPE), linear low-density polyethylene (LLDPE), and high-density polyethylene (HDPE) using three extruders to form a three-layer film structure with reasonable structure and complementary functions (typically ABA and ABC structures). Its advantages include good mechanical strength, flexibility, heat sealing, low-temperature impact resistance and high transparency. At the same time, it can achieve anti-fog, anti-ultraviolet, and water vapor barrier functions through formula adjustment. Compared with single-layer or double-layer films, three-layer co-extruded films have better comprehensive performance and cost-effectiveness.

The global PE Three-layer Co-extrusion Film market size was estimated at USD 657.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
