Abstracts

PE VCI shrink film is a specialized packaging material made from polyethylene (PE) and embedded with volatile corrosion inhibitors (VCI). This film is designed to provide both physical protection and corrosion resistance for metal products during storage and transportation. When applied, the film shrinks tightly around the item, creating a secure barrier that protects against moisture, dust, and contaminants. The VCI compounds embedded in the film release vapor molecules that settle on the surface of the metal, forming an invisible layer that prevents rust and corrosion. PE VCI shrink film is widely used in industries such as automotive, machinery, and electronics, where metal parts and components require protection against environmental factors that could lead to corrosion and damage.

The global PE VCI Shrink Film market size was estimated at USD 130.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
