Report Overview

The leguminous family's highly cultivated pea is a nutrient-dense pulse crop. The solubility, ability to hold both water and oil, ability to form emulsions, ability to gel, and viscosity of pea derivatives are all great functional qualities. They contain high-quality proteins, starch, carbs, dietary fibers, and micronutrients like vitamins and minerals. Moreover, it is enhanced with non-nutritional phytochemicals, antioxidants, flavonoids, tannins, and other phenolic compounds. By fostering intestinal bacteria, dietary fiber taken from a cell wall's cotyledon, seed coats, and pods has been shown to hasten gastrointestinal activity. By lowering the glycemic index and decreasing the digestion of pea starch, intermediate amylose helps to keep blood sugar levels stable.
