Report Overview

Peach aldehyde, also known as gamma-undecalactone, is a synthetic aroma compound widely used in the fragrance and flavor industries to impart a fruity, peachy scent. It is a key ingredient in perfumes, cosmetics, and food flavorings, particularly in products aiming for a sweet, creamy, or lactonic peach-like character. The demand for peach aldehyde is driven by the growing consumer preference for natural and exotic fruit flavors in food and beverages, as well as the rising popularity of fruity and gourmand fragrance profiles in personal care products. The market is influenced by trends in clean-label and natural ingredients, pushing manufacturers to innovate in synthetic alternatives that mimic natural aromas. However, regulatory scrutiny on synthetic additives and competition from natural extracts could pose challenges. Key players include fragrance houses and specialty chemical companies, with applications spanning food, cosmetics, and household products. The Asia-Pacific region, particularly China and India, shows strong growth potential due to expanding middle-class demand for flavored and scented consumer goods. Sustainability and cost-effective production methods remain critical factors shaping the industry's future.

The global Peach Aldehyde market size was estimated at USD 120.58 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
