Abstracts

The pedal incense making machine is a mechanical device designed to streamline the traditional manual process of producing incense sticks by utilizing a foot-operated pedal mechanism to press and extrude a prepared mixture of aromatic materials, binding agents, and water through a die, forming uniform sticks that are then cut to standard lengths and dried. This equipment is primarily used by small to medium-scale incense manufacturers, religious institutions, and artisan producers seeking to increase output while maintaining consistency in product dimensions and density, reducing labor dependency, and improving operational efficiency compared to hand-rolling methods. The machine typically features adjustable settings for stick thickness and length, is constructed from durable materials such as cast iron or steel to withstand repeated use, and operates without electricity, making it suitable for regions with limited power access or for workshops prioritizing low-cost, sustainable production methods.

The global Pedal Incense Making Machine market size was estimated at USD 22.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
