## Abstracts

A pedal kayak works by using the force of your feet to power the fins or propeller that is directly under the hull of the kayak. The kayaker's legs do the work instead of the kayaker's hands and fins or propellers are used to generate power instead of paddles or oars. One of the most obvious benefits of a pedal kayak is that it's hands-free kayaking. We don't have to tire out our arms paddling on the water and instead use our legs to propel the kayak. Pedals allow us to control our kayak's position by using our legs and the rudder steering handle.

The global Pedal Kayaks market size was estimated at USD 77.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
