### Report Overview

**Pedelec Battery:** A Pedelec battery, also known as an e-bike battery or electric bicycle battery, is a rechargeable energy storage device used in pedal-assist electric bicycles (Pedelecs). These batteries are typically lithium-ion or lithium-polymer and are designed to provide electrical power to an electric motor, which assists the rider's pedaling efforts. The battery's capacity is measured in watt-hours (Wh) and determines the range a Pedelec can achieve on a single charge. It is usually mounted on or within the bicycle frame and can be removed for charging. The Pedelec's motor controller manages the interaction between the battery, the rider's pedaling, and the desired level of assistance, ensuring a seamless and efficient riding experience.

The global Pedelec Batteries market size was estimated at USD 961.50 million in 2023 and is projected to reach USD 2037.11 million by 2032, exhibiting a CAGR of 8.70% during the forecast period.
