## Abstracts

A pedelec city bike refers to a type of electric bicycle (e-bike) designed primarily for urban commuting and city riding, where "pedelec" stands for "pedal electric cycle." Pedelec city bike has shown a booming trend around the world in recent years and has become an important choice for green travel. The current market development has the following characteristics: Good market prospects: As people's awareness of environmental issues continues to increase, more and more people are seeking environmentally friendly transportation methods. Pedelec city bikes are seen as a more environmentally friendly alternative to cars for short-distance commuting and urban transportation. The traffic congestion problem in cities is becoming increasingly prominent. As a flexible and fast means of transportation, Pedelec city bike is used to solve the problem of urban traffic congestion, especially for short-distance travel. Some governments encourage people to use bicycles by formulating policies and providing subsidies, including building bicycle lanes, providing bicycle rental services, and providing tax exemptions for purchasing bicycles. The continuous advancement of battery technology, motor technology and intelligent technology has significantly improved the Pedelec city bike's endurance, safety and user experience. In terms of regional development: At present, the main consumption areas of Pedelec city bike are concentrated in Europe, the United States and Japan. There are obvious differences from traditional electric vehicles in terms of core components, working principles, product positioning and selling price. The penetration rate in Japan has exceeded 40%, the European market maintains high growth, and the United States is in a low-penetration and high-growth stage. The penetration rate of the Chinese market is less than 1%. Since the development of China's public transportation system lags behind the urbanization process, low- and middle-income groups prefer relatively low-priced battery vehicles for travel, thus limiting sales. The Chinese market has vast space and needs to be driven by changes in consumer attitudes and policy guidance to drive sales growth.

The global Pedelec City Bike market size was estimated at USD 1450.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
