Abstracts

A pedelec (from pedal electric cycle) is a bicycle where the rider's pedalling is assisted by a small electric motor; thus it is a type of low-powered e-bike. However, unlike some other types of e-bikes, pedelecs are classified as conventional bicycles in many countries by road authorities rather than as a type of electric moped. Pedelecs include an electronic controller which cuts power to the motor when the rider is not pedalling or when a certain speed ? usually 25 km/h (16 mph) ? is reached.

The global Pedelec market size was estimated at USD 14540.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.12% during the forecast period.
