Abstracts

A pedestal mounted crane is a type of fixed-base lifting equipment consisting of a rotating jib or boom mounted on a vertical pedestal that is securely anchored to a foundation, typically made of concrete. These cranes are designed for repetitive lifting and material handling tasks in a fixed location, offering a combination of high load capacity, precise positioning, and durability compared to mobile alternatives. They are commonly used in industrial settings such as ports, manufacturing plants, warehouses, and construction sites where consistent lifting operations are required within a specific radius. The design allows for both manual and powered operation, with variations including knuckle-boom, stiff-boom, or articulating configurations to suit different applications, such as loading/unloading cargo, moving heavy machinery, or assisting in assembly processes. Their stationary nature provides stability for heavy lifts while minimizing floor space usage compared to overhead cranes.

The global Pedestal Mounted Cranes market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
