Report Overview

Pediatric Cranial Remolding Orthoses, also known as cranial helmets, are custom-made medical devices tailored to treat various head shape deformities in infants, including plagiocephaly, brachycephaly, and scaphocephaly. Effective primarily in infants aged 3 to 18 months, early intervention is optimal due to decreased growth rates as the child ages. These orthoses are meticulously fitted to the infant's head, serving dual purposes: providing protective cushioning to alleviate pressure and ensuring uniform distribution across the skull, while also facilitating skull expansion in flat areas to accommodate the growing brain. By offering personalized support, these orthoses aid in correcting deformities and fostering symmetrical skull growth, ultimately improving the infant's overall well-being.
