## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PEEK Filament competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PEEK Filament is a 3D printing filament made of high-performance special engineering plastic PEEK as the base material. It has excellent heat resistance (melting point 343?), chemical corrosion resistance, flame retardancy and biocompatibility, and is suitable for additive manufacturing technologies such as fused deposition modeling (FDM). The diameter of the filament is usually 1.75mm or 2.85mm, and it needs to be processed at high temperature (nozzle temperature 380-400?, hot bed temperature 150-180?). The products can be used in high-end fields such as aerospace, medical equipment, and electronics and electrical, such as customized orthopedic implants, industrial fixtures and high-temperature resistant structural parts, and the rapid manufacturing and functional optimization of complex geometric shapes can be achieved through 3D printing technology.

**Factors Affecting Prices**

**Raw material costs:** The price fluctuations of core raw materials fluoroketone (PTA, PPD) directly affect the production cost, accounting for more than 50% of the total cost of PEEK.

**Technical barriers:** The high-temperature processing technology is complex and requires a dedicated 3D printer (nozzle temperature 380-400?), and the initial investment in equipment is high.

**Market supply and demand:** The growth in demand in high-end fields such as aerospace, new energy vehicles, and humanoid robots has driven prices up, while fierce competition in the mid- and low-end markets has led to price differentiation.

**Brand premium:** The price of international brands (such as Solvay) is usually 2-3 times that of domestic ones. The average price of domestic PEEK Filament is about 500 yuan/kg, and the average price of imported products is 800-1000 yuan/kg.

**Global competition pattern:** First echelon: Victrex in the UK occupies 50%-60% of the global market share and dominates the high-

end medical and aerospace markets. Second echelon: Solvay and Evonik each account for about 10%, focusing on industrial machinery and electronic and electrical fields. The third echelon: Zhongyan Co., Ltd. (China) occupies 10% of the global market share and 30% of the Chinese market, replacing imports with cost-effective advantages. Regional market: Europe: 38% market share in 2024, mainly used in aerospace and automotive lightweighting. Asia-Pacific: 37% market share in 2024, China is the largest consumer market. North America: 25% market share in 2024, with strong demand for medical implants and 3D printing. Conclusion and Suggestions: The PEEK Filament industry is in a critical period of technological iteration and market expansion, and it is necessary to strengthen collaborative innovation with downstream fields such as aerospace, medical, and robotics. Investors can pay attention to companies with large-scale production capabilities, high technical barriers, and diversified application scenarios, such as Zhongyan Co., Ltd.

The global PEEK Filament market size was estimated at USD 869.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
