Abstracts

A Pellet Extruder 3D Printer is a type of 3D printer that uses plastic pellets as the printing material instead of traditional filament spools. It operates by melting these pellets in an extruder and then depositing the molten plastic layer by layer to build a 3D object. This method allows for faster, large-scale printing and reduced material costs, as pellets are cheaper than filament. It also offers more flexibility in material choice, enabling the use of industrial-grade polymers, recycled materials, or custom material blends. Pellet Extruder 3D Printer is an advanced type of 3D printer that uses thermoplastic pellets instead of traditional filament or resin as the printing material. These printers are equipped with a screw or extruder that melts and deposits the plastic pellets layer by layer to create the desired object. Pellet 3D printing is often more cost-effective and versatile, allowing the use of a wide range of materials, including recycled plastics. Pellet Extruder 3D Printer typically use lower-cost raw materials compared to traditional filament printers, making them more economical for large-scale production, which is attractive to industries such as automotive, consumer goods, and aerospace. In 2023, automotive accounted for 29.37% of the sales market share, and is expected to account for 31.25% of the market share in 2030, while consumer goods and aerospace accounted for 22.22% and 15.69% respectively.. In terms of type, industrial grade accounts for the vast majority of the market share, accounting for 90.25% of the market share in 2023, and is expected to account for 93.55% of the market share in 2030.

The global Pellet Extruder 3D Printer market size was estimated at USD 47.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.20% during the forecast period.
