Abstracts

Peltier Module Components, also known as thermoelectric coolers (TECs), are solid-state devices that utilize the Peltier effect to transfer heat between two surfaces when an electric current is applied. They consist of multiple pairs of p-type and n-type semiconductor materials connected electrically in series and thermally in parallel. When a DC current passes through the module, one side absorbs heat (cooling side), while the other side releases heat (heating side). This allows for precise temperature control without moving parts, making them compact, reliable, and quiet. The history of Peltier Module Components can be traced back to the discovery of the Peltier effect in the 19th century, but it was not until the mid-20th century, with the development of semiconductor materials, that Peltier Module Components technology was truly commercialized. Early Peltier Module Components were mainly used in the military and aerospace fields. After the 1980s, with the rapid development of the electronics industry, Peltier Module Components gradually entered the consumer electronics, medical equipment and industrial fields. Peltier Module Components work based on the Peltier effect. When current passes through a thermocouple composed of p-type and n-type semiconductor materials, one end absorbs heat (cold end) and the other end releases heat (hot end), thereby achieving the effect of cooling or heating. This solid-state thermal management technology does not require mechanical moving parts and has the characteristics of compact structure, no noise, high reliability, and precise temperature control. In addition, by reversing the direction of the current, Peltier Module Components can also achieve a heating function, which gives it a unique advantage in bidirectional temperature control applications. The core advantage of Peltier Module Components lies in their solid-state design and precise temperature control capabilities, but their efficiency is relatively low and they are usually used in low-power or high-space and noise requirements. With the popularization of technologies such as 5G communications, artificial intelligence, and the Internet of Things, the development of

Peltier Module Components in consumer electronics, communications, automobiles, and medical fields has been accelerated. According to our data, the global shipment of Peltier Module Components will exceed 250 million units in 2024, and it is expected to continue to grow at an average annual compound growth rate (CAGR) of more than 10% by 2030. North America, Europe, and Asia Pacific are the main regions of the Peltier Module Components market. The North American market benefits from strong demand for the electronics industry and medical technology, while the European market focuses on environmental protection and sustainable development. The Asia-Pacific region (especially China, Japan, and South Korea) has become the fastest growing region in the global Peltier Module Components market with its rapidly developing electronics manufacturing and new energy vehicle industries. In 2024, the market size of the Asia-Pacific region will be nearly US\$500 million, accounting for more than 50% of the world, of which China occupies the largest consumer market in Asia-Pacific. From the perspective of industry participants, the main players in Peltier Module Components include Ferrotec, KELK Ltd. (Komatsu), Coherent Corp (formerly II-VI Incorporated), Laird Thermal Systems, Z-MAX, KJLP, Thermion Company, Phononic, Guangdong Fuxin Technology, KYOCERA, Thermonamic Electronics, TE Technology, Same Sky (formerly CUI Devices), Kryotherm Industries, Crystal Ltd, Merit Technology Group, Wakefield Thermal, etc. The leading manufacturers are mainly concentrated in Japan, Europe and the United States. According to our data, the revenue share of the world's top 5 manufacturers in 2024 is about 55%, among which Ferrotec, ranked first, has a share of more than 20%. Due to the late start in China, most of the products are concentrated in the field of consumer electronics, and there is a certain gap between the technology and management level and the world's advanced level. Therefore, the high-end application fields such as communications, medical, and automotive markets are mainly occupied by international leading manufacturers. From the perspective of downstream applications, shipments in consumer electronics, communications, medical, automotive, industrial, defense and aerospace and other fields have continued to rise. Among them, consumer electronics still occupies the largest consumer market. In 2024, the consumer electronics market size accounted for 25% of the world. With the rapid penetration of 5G communications and electric vehicles, the communications and automotive fields will show a higher growth rate during the forecast period.

The global Peltier Module Components market size was estimated at USD 870.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
