Abstracts

PEN (Polyethylene Naphthalate) films are high - performance polyester films. They are mainly produced through a polycondensation reaction between 2,6 - naphthalenedicarboxylic acid (NDA) or dimethyl 2,6 - naphthalenedicarboxylate (DMN) and ethylene glycol (EG). The characteristic of its chemical structure is that the molecular chain contains a naphthalene ring structure. This is different from the common PET (Polyethylene Terephthalate) films, where the molecular chain has a benzene ring structure. The naphthalene ring structure endows PEN films with higher strength, rigidity, and thermal stability.

The global PEN Films market size was estimated at USD 104.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
