Abstracts

Pentabromophenyl ether, commonly known as pentabromodiphenyl ether (pentaBDE), is a brominated flame retardant historically used in polyurethane foam, textiles, electronics, and various industrial applications to reduce flammability and meet fire safety standards; however, due to its persistence, bioaccumulation, and toxicity, it has been classified as a persistent organic pollutant (POP) under the Stockholm Convention, leading to widespread regulatory bans and phase-outs in most regions. Despite its discontinued production and use in many countries, legacy products containing pentaBDE remain in circulation, and niche demand persists in some unregulated markets or specific exempted applications, creating a limited but complex market characterized by environmental concerns, strict compliance requirements, and a shift toward safer alternatives.

The global Pentabromophenyl Ether market size was estimated at USD 45.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -3.50% during the forecast period.
