Abstracts

Peptide building blocks are specialized chemical compounds, typically protected amino acids or short peptide sequences, that serve as fundamental units in the synthesis of longer peptides and proteins through solid-phase or solution-phase methods; these building blocks are characterized by specific protecting groups (e.g., Fmoc, Boc) on reactive functional groups (such as amine and carboxyl termini) to enable controlled, stepwise chain elongation while preventing undesirable side reactions, and they are essential tools in pharmaceutical research, drug development, biologics production, and academic studies for creating peptides with precise sequences, modifications, or labeled variants.

The global Peptide Building Block market size was estimated at USD 1025.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
