Abstracts

Peptide drugs for intestinal diseases are a class of innovative therapeutics based on peptide molecules, primarily used for treating inflammatory bowel disease (IBD), irritable bowel syndrome (IBS), intestinal infections, and other digestive disorders. These drugs are known for their high specificity and low toxicity, acting by modulating gut immune responses, repairing intestinal barrier function, or regulating neuro-gut signaling pathways. For example, GLP-1 receptor agonists are used to treat metabolic disorders related to gut function, while certain antimicrobial peptides directly inhibit the growth of intestinal pathogens.
