## Abstracts

Peptide manufacturing and development services provide end-to-end CRO/CDMO capabilities, covering peptide sequence design, process development, scale-up, GMP manufacturing and quality support. Upstream inputs include natural and non-natural amino acids, high-loading resins, coupling/activation reagents, organic solvents, and PEG or lipid modification materials. Key downstream customers include global pharma companies, biotech firms, research institutes, IVD manufacturers, medical-aesthetics brands and functional food companies, with demand focused on GLP-1 APIs, multi-indication therapeutic peptides, long-acting modified peptides, vaccine and diagnostic peptides, and cosmetic or nutritional peptides. In 2024, global peptide CDMOs generally reported gross margins in the 10%-35% range, driven by customer mix, innovation share and capacity utilization. Market growth is supported by pro-innovation and rare-disease policies, supply-chain localization needs, process innovations such as automated and continuous-flow SPPS, and rising demand from GLP-1 therapies and healthy-aging trends. At present, the peptide manufacturing and development service market is characterized by rapid expansion alongside structural differentiation. Demand continues to grow as peptide-based molecules gain prominence in innovative drug pipelines, technology cycles accelerate in metabolic and immuno-oncology fields, and consumer-facing applications such as aesthetics and functional nutrition broaden. Leading CDMOs consolidate their market position through technological depth, quality systems and global regulatory expertise, while new entrants largely compete in lower-complexity segments, resulting in scarcity of high-end capacity and intensifying competition in the lower tiers. Differences in process sophistication, automation and supply-chain resilience create an increasingly stratified competitive landscape, where capacity utilization and project conversion efficiency become key determinants of competitiveness. Future development will be shaped by multi-dimensional advances,

including continuous-flow solid-phase synthesis, greener solvent systems, intelligent process control, high-efficiency purification technologies and sequence engineering, all of which enhance manufacturability of long, hydrophobic or heavily modified peptides. With more innovative drugs advancing into multi-regional clinical development, the need for globally distributed GMP capacity, cross-border compliance support and integrated CMC capabilities will become standard expectations. Meanwhile, peptide applications are expanding from classical therapeutic roles to precision delivery systems, drug?device combinations, vaccine adjuvants, cell therapy components, as well as aesthetic and nutritional domains, driving service providers to extend upstream into early R&D and downstream into applied innovation. Market drivers arise from policy incentives, technological breakthroughs and evolving consumer preferences. Accelerated regulatory pathways for novel and rare-disease therapies, increasing emphasis on supply-chain security and localization, and the push for compliant manufacturing encourage pharmaceutical companies to outsource more peptide programs to specialized CDMOs. Technological progress is improving cost structures and delivery efficiency, unlocking broader commercialization potential for complex peptides. On the demand side, trends such as personalized health management, weight control and healthy aging reinforce the momentum of peptide use in medical aesthetics, functional nutrition and emerging cross-sector applications. However, the industry also faces constraints, including supply-chain volatility for certain critical raw materials and equipment, tightening environmental regulations, and increasing regulatory complexity from clinical development through commercialization. Divergent quality standards across regions add difficulty to global project execution. The intrinsic challenges of peptide process development?long optimization cycles, scale-up risks and high requirements for cross-disciplinary expertise?limit the speed at which newcomers can build competitiveness. In addition, cost pressures, pricing dynamics and the need to maintain stable, reliable delivery place higher expectations on the operational strength and sustainability of service providers.

The global Peptide Manufacturing and Development Services market size was estimated at USD 4558.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
