Abstracts

Perfluoropolyether (PFPE) electronic coolant is a highly efficient cooling medium known for its superior thermal conductivity and chemical stability, capable of maintaining performance across an extremely wide temperature range to effectively absorb and transfer heat generated by electronic devices, keeping the operational temperature within a safe range. This coolant exhibits excellent electrical insulation properties, ensuring non-conductivity in high-temperature or high-voltage environments, providing additional safety for electronic components. Furthermore, perfluoropolyether electronic coolant has a very low vapor pressure and good oxidation resistance, allowing for minimal evaporation or decomposition over long periods of use, thereby reducing maintenance frequency and costs. Additionally, it is highly compatible with a wide range of materials, avoiding corrosion to the internal structure of electronic devices and meeting high technical standards for use.

The global Perfluoropolyether(PFPE) Electronic Coolant market size was estimated at USD 208.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
