Abstracts

A perforated mulch sheet is an agricultural tool used to cover soil ridges where crops are sown or seedlings are planted. These sheets have pre-punched holes at specific intervals and sizes, making them popular among farmers cultivating the same crop over large areas and home gardeners who cannot frequently weed their fields. Typically made of plastic film, these mulch materials can also be composed of wood chips or straw. For longer lengths (e.g., 50 m or more), they are often sold in a rolled tube form at home and garden stores.

The global Perforated Mulch Sheet market size was estimated at USD 479.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
