Report Overview:

Perfusion is a means to maintain a cell culture bioreactor in which equivalent volumes of media are simultaneously added and removed from the reactor while the cells are retained in the reactor.

Perfusion bioreactors offer several advantages over traditional fed-batch bioreactors when addressing problems of scalability and increasing demand.

Perfusion bioreactors culture cells over much longer periods, even months, by continuously feeding the cells with fresh media and removing spent media while keeping cells in culture. In perfusion there are different ways to keep the cells in culture while removing spent media.

The Global Perfusion Bioreactors Market Size was estimated at USD 750.96 million in 2023 and is projected to reach USD 1280.38 million by 2029, exhibiting a CAGR of 9.30% during the forecast period.
