## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Permanent Antistatic Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Permanent Antistatic Agent is a functional additive designed to provide long-lasting antistatic properties to plastic and polymer materials. Unlike conventional migratory antistatic agents, which rely on surface migration and can diminish over time, permanent antistatic agents are incorporated into the polymer matrix and remain effective throughout the product's life cycle. They work by facilitating the dissipation of static electricity, preventing the buildup of surface charges that can attract dust, cause handling issues, or pose safety risks in electronic and flammable environments. These agents are widely used in applications such as electronic packaging, automotive parts, medical devices, and industrial components where stable and durable antistatic performance is essential. Asia-Pacific, particularly China, Japan, South Korea, and Taiwan, dominates the global market with nearly 44% share, fueled by a robust electronics manufacturing base and increasing use of engineering plastics in automotive and industrial sectors. North America and Europe are mature markets, with demand concentrated in high-value segments such as medical packaging and aerospace materials. Emerging regions like Latin America and the Middle East are still developing but show promising growth potential as industrial infrastructure expands and quality standards rise. The competitive landscape is characterized by a mix of global chemical giants and specialized compounders. Major players such as Sanyo Chemical, BASF, Arkema, and ADEKA lead in upstream chemical innovation and formulation technologies. Chinese companies are rapidly improving in polymer modification and are beginning to compete in both domestic and export markets. In 2024, the global top three players hold a share approximately 58% in terms of revenue.

The global Permanent Antistatic Agent market size was estimated at USD 231.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
