Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Permanent Antistatic Solution competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Permanent antistatic solutions are chemical treatments or additives designed to provide long-lasting protection against static electricity on various surfaces, including plastics, textiles, coatings, and electronic components. Unlike temporary antistatic agents, which lose effectiveness over time or after washing, permanent antistatic solutions form a durable layer or integrate into the material matrix to maintain consistent surface conductivity and prevent electrostatic discharge (ESD). In 2024, global permanent antistatic solutions production reached approximately 41.18 kilotons, with an average global market price of around US\$ 5,600 per ton.

The global Permanent Antistatic Solution market size was estimated at USD 231.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Permanent Antistatic Solution market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
