Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Permanent Magnet Low Field MRI competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Low-field MRI refers to MRI equipment with a lower magnetic field strength than high-field MRI. Compared with traditional high-field MRI, low-field MRI has the following advantages: the equipment is small in size and easy to move and install; the cost is low and it is more suitable for primary medical institutions and low-income countries; it can meet most clinical diagnosis needs, such as the detection of nerve, muscle, bone and other diseases; it is safer for patients and does not require the use of radioactive substances. MRI with a field strength of less than 0.5T is called low-field MRI, and this type of magnetic resonance is generally a permanent magnet type.

The global Permanent Magnet Low Field MRI market size was estimated at USD 618.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
