Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Permanent Magnet Synchronous Servo Motor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of permanent magnet synchronous servo motors will reach 1.66 million units, with an average selling price of US\$1800 per unit. A permanent magnet synchronous servo motor (PMSM) is a high-performance AC servo motor that uses permanent magnets as its excitation source. Its rotor features embedded or surface-mounted permanent magnets, achieving synchronous operation through the rotating magnetic field generated by the stator's three-phase AC current. Compared to traditional asynchronous motors, PMSMs offer advantages such as fast response, high control accuracy, high torque density, high efficiency, and low energy consumption. They also possess excellent dynamic performance and overload capacity, enabling precise control of speed, position, and torque. The upstream segment of the permanent magnet synchronous servo motor industry chain primarily includes suppliers of raw materials and core components, including rare earth permanent magnet materials (NdFeB magnets, such as Ningbo Jinci and Zhenghai Magnetics), high-performance silicon steel sheets (such as Baosteel and Ansteel), copper wire, bearings (such as SKF and NSK), power semiconductor chips, and drive controllers (such as Infineon, ON Semiconductor, and Texas Instruments). The midstream segment comprises motor manufacturers and servo drive system integrators (such as Yaskawa Electric, Mitsubishi Electric, Siemens, Delta, and INVT), responsible for motor design, assembly, and performance optimization. Downstream applications include companies in CNC machine tools (Haitian Precision and Shenyang Machine Tool), industrial robots (Fanuc, Kuka, and Efort), semiconductor equipment, textile machinery, packaging and printing, intelligent logistics, medical equipment, and new energy vehicles (BYD, CATL,

and Tesla). The synergy between these upstream and downstream segments is driving the development of the precision manufacturing and automation industries.

The global Permanent Magnet Synchronous Servo Motor market size was estimated at USD 2987.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
