Abstracts

Permanent magnetic chucks are industrial workholding devices that utilize powerful permanent magnets, typically made from rare-earth materials such as neodymium or samarium cobalt, to securely hold ferromagnetic workpieces during machining, grinding, milling, or inspection processes without the need for external power sources or complex clamping mechanisms. These devices function by manipulating internal magnetic circuits?often through a lever or rotating mechanism?to alternate between active (on) and inactive (off) states, providing a reliable, energy-efficient, and maintenance-friendly solution that minimizes workpiece distortion and improves operational safety in environments where sparks or electrical failures could pose risks.

The global Permanent Magnetic Chucks market size was estimated at USD 1212.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
